

Jonas Montonen

Varkaus, Finland | +358 44 243 5345 | montonen.jonas@gmail.com | [Portfolio](#)

Profile

Software Engineer and Technical Lead with experience building commercial software and game systems from concept to production. Strong background in C++, Python, real-time systems, software architecture, and AI-assisted development workflows.

Experienced in leading technical development, designing scalable systems, automating workflows, and turning business requirements into practical software solutions.

Core Competencies

Languages & Engineering

- C++
- Python
- SQL
- C#
- Object-Oriented Design
- Software Architecture
- Performance Optimization

Systems & Automation

- AI-Assisted Development
- Workflow Automation
- Data-Driven Systems
- REST APIs
- System Integration
- CI/CD Fundamentals

Tools

- Unreal Engine 5
- Git

- Visual Studio
- VS Code
- Microsoft Azure (basic)
- Terraform (basic)

Professional

- Technical Leadership
- Agile Development
- Cross-Functional Collaboration
- Solution Design
- Technical Planning

Professional Experience

Founder & Lead Developer

Varattu Valo Games | 2023 – Present

- Lead development of commercial software and multiplayer game projects.
- Design scalable C++ architectures and real-time gameplay systems.
- Build internal AI-powered automation tools that improve development efficiency.
- Develop reusable frameworks for gameplay, animation, networking, and content pipelines.
- Collaborate with multidisciplinary teams and external partners from planning through production.
- Drive technical decisions, architecture, and long-term project planning.

Selected Projects

Thalassophobia (Unreal Engine 5)

- Developed modular gameplay systems, networking, and engine features in C++.
- Built reusable frameworks for AI, animation, procedural systems, and gameplay.
- Optimized performance, memory usage, and large-scale runtime systems.
- Created data-driven tools and pipelines for efficient content production.

AI & Development Tooling

- Built AI-assisted workflows using modern LLMs to automate software development.
- Developed internal tools for content generation, workflow automation, and engineering productivity.
- Integrated AI into daily development processes to accelerate iteration and reduce manual work.

Education

Bachelor of Engineering (B.Eng.)

Kajaani University of Applied Sciences

Specialization in Game Programming & Software Development.
